# Importance of Software Testing

## 01 Quality Assurance

Software testing is crucial for ensuring the quality and reliability of software products.

## 02 Risk Mitigation

Testing helps mitigate risks associated with software like failures, security and data loss.

## 03 Cost Savings

Early detection and resolution of defects through testing can save significant costs in the long run.

## 04 Compliance

Many industries have specific regulations and standards that software must adhere to.

## 05 Improvement

Testing is an iterative process that helps teams continuously improve their software.

## 06 Scalability

Testing ensures that software can handle the anticipated load and perform optimally under different scenarios.

# Advantages of Software Testing

**01**

## Improved Quality

Software testing helps improve the quality of the software by identifying and fixing bugs, errors, and defects.

**02**

## Time Saving

Testing helps identify and address issues that could cause delays or interruptions in software development.

**03**

## Increased Efficiency

Testing helps identify and fix performance issues and scalability limitations in software systems.

**04**

## Increased Security

Security testing is crucial for identifying vulnerabilities and weaknesses in software systems.

# Scientific Calculator

It is a device that goes beyond basic arithmetic calculations and provides a wide range of advanced functions to solve complex mathematical problems.

The key features of the scientific calculator typically include arithmetic operations (addition, subtraction, multiplication, division), trigonometric functions (sine, cosine, tangent), logarithmic functions, exponential functions, statistical functions and more.

Additionally, it offers memory storage and recall functionality, as well as the ability to perform calculations with variables.

# Advantages of Selected Application

## **Accuracy**

Scientific calculator application ensures that calculations are performed correctly.

## **Efficiency**

It eliminates the need for manual calculations and saving valuable time during the testing process.

## **Functionality**

Scientific calculators offer a wide range of mathematical functions and statistical calculations.

## **Portability**

With application installed on a mobile device or computer, testers can carry it with them wherever they go.

## **Documentation**

It provides features for documenting and storing calculations.

# Testing Techniques

## Unit Testing

Function or method is tested independently to ensure that it performs as expected.

## Integration Testing

It ensures that the various functions work together seamlessly and produce the expected results.

## System Testing

It focuses on validating the system behaviour, performance, and functionality against the specified requirements.

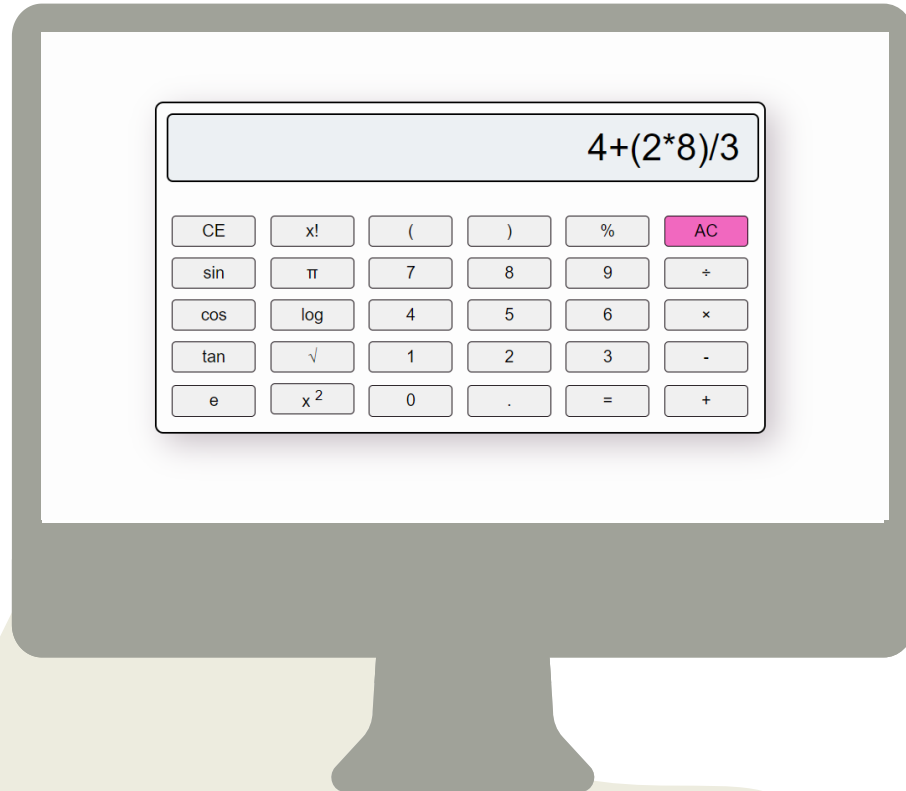

## Boundary Value Testing

Testing identify the minimum and maximum values that can be accepted by each function and test the calculator's response.

## Equivalence Class Testing

Input space is divided into equivalence classes or groups. Each group represents a set of inputs that should produce the same output.

# UI/UX

# Katalon Studio

Katalon Studio is a free automation testing solution developed by Katalon LLC. The user interface is a complete integrated development environment (IDE) implemented on Eclipse rich client platform(RCP). The main scripting language is Groovy, Java, and JavaScript and can be executed against all modern browsers, iOS, and Android applications supported by Selenium and Appium.

- Start Katalon Studio
- Record the execution of the website for relay and capture
- Modify Test cases for all possible cases
- Create Test Suite for every functionality of the website
- Add test cases to test Suite
- Variable data binding
- Run all the test suite one by one
- Analyze the result

# Test Suite

The screenshot displays the Test Suite application interface. On the left is a 'Tests Explorer' sidebar with a search bar and a tree view of project files. The main area is divided into two panes. The top pane, titled 'Execution Information', contains a table with columns for No., ID, Description, Flakiness (%), Latest Run, Avg.Duration, and Run. The bottom pane shows a progress bar and a log table with columns for Level, Time, and Message.

**Tests Explorer**

- Profiles
  - Test Cases
    - Addition
    - BODMAS
    - Cosine
    - DivideByZero
    - Division
    - FloatDivision
    - Modulus
    - Multiplication
    - NumberVerification
    - OperatorVerification
    - Scientific\_Normal
    - Sine
    - Subtraction
    - Tangent
- Object Repository
  - Page\_Scientific Calculator
- Test Suites
  - New Test Suite
- Data Files
- Checkpoints
- Keywords
- Test Listeners
- Reports
- TestOps
- Include
- Plugins
  - .gitignore
  - build.gradle
  - console.properties

**Execution Information**

Buttons: Add, Delete, Move Up, Move Down, View Test Run History, Show Data Binding

Search: Enter text to search...

No.	ID	Description	Flakiness (%)	Latest Run	Avg.Duration	Run
1	Test Cases/Addition		--	--	--	<input checked="" type="checkbox"/>
2	Test Cases/BODMAS		--	--	--	<input checked="" type="checkbox"/>
3	Test Cases/DivideByZero		--	--	--	<input checked="" type="checkbox"/>
4	Test Cases/Scientific_Normal		--	--	--	<input checked="" type="checkbox"/>
5	Test Cases/Sine		--	--	--	<input checked="" type="checkbox"/>
6	Test Cases/OperatorVerification		--	--	--	<input checked="" type="checkbox"/>
